

News Story - World Science Day

This week children have been taking part in science activities for 'World Science Day.'

Preschool children have taken part in creating mini volcano eruptions. Children have created lava using lemons, baking soda, vinegar, food colouring and straws. They thoroughly enjoyed this experiment and were introduced to new vocabulary "Lava" and "Magma".

Toddlers incorporated children's current focus of colours for their science experiment.

They watched over time how coloured water can be transported from one cup to the other with the use of just simple kitchen roll!

Toddlers enjoyed coming back to the table throughout the session to check on their experiment and reporting back to Apa what was happening!

"Look the cup, it's got water now!"
