

News Story - Planting

This week the children have been focusing on planting as the Summer season has set in. Children have enjoyed digging in the compost in our new nursery planter and planting some yummy carrots, potatoes and coriander. Children have then spent the week looking after the soil, by watering daily to help the vegetables grow.

The children have also explored the life cycle of sunflowers, spending some time planting their own individual sunflowers. Over the coming weeks the children will observe how they grow in the nursery before taking them home.

Children have also been doing some collage pictures of what they think a sunflower will look like.
